

Military vehicle production: **Right part, right** **quantity, right time**

Customer

Global leader in designing, engineering, producing, supporting and sustaining tracked and wheeled military combat vehicles.

Customer Challenge

Our customer was seeking a lean approach to ensure JIT delivery to their production lines.

GXO Solution

GXO provides receiving, inspection, inventory control and line-side delivery of parts to the customer's plant, supporting tank production, vehicle upgrades and kitting and distribution, along with other small projects for governments worldwide. GXO's approach is driven by a line-side and ROP (reorder point) 2-bin implementation plan that eliminates waste closest to the customer.

Results

Increased inventory accuracy by 63%, reduced dock-to-stock from 48 hours to 24 hours and shortened receiving issues backlog from > 3 months to ≤ 7 days.

Standardized work processes ensure that all GXO associates provide the right part in the right quantity at the right time. Close working relationship with our customer ensures that deliverables evolve with our customer's needs. Suppliers are versed in our customer's standards and expectations.

GXO also implemented Standard Work Instructions for our customer to increase its efficiency.
